# ABOUT THE 4JNET

For most of blockchain white papers are exaggerated. It is used to collecting investment with a good imagination of the future. Those kind of overstated paper does not fit into our purpose. Because we want to create fair rules and delivering the facts.

Besides, we would like to disclose the white paper right before the launch to not disturbing your decision makings.

It diminishes the contents of the unexecuted part as much as possible.

4Jnet Technology Limited built 'Justice-Universe'<sup>1</sup> of Metaverse<sup>2</sup> platform that puts fairness priority.

Metaverse platform from many companies still exists in PPT. We expect that it will take at least decade to meet the PPT to be completed.

We are creating a protocol that allows numerous developers to participate.

It will update from simple rules to complex rules by referring to the user's opinion.

Justice-Universe will deal with the elements of politics and economy and combine voting, parliament, country, and cryptocurrency issuance.

In January 2022, we would like to introduce the Justice-Universe.

1. The official name of 4jnet technology limited's metaverse platform

2. The metaverse (a portmanteau of "meta-" and "universe") is a hypothesized iteration of the internet, supporting persistent online 3-D virtual environments[1][2] through conventional personal computing, as well as virtual and augmented reality headsets.[3][2] Metaverses, in some limited form, are already present on platforms like VRChat or video games like Second Life.[4]

# ABOUT THE 4JNET TOKEN

4jnet token is the base currency of Justice-Universe.

AMM<sup>3</sup> rules are required to list tokens and created the first pair on Dex <sup>4</sup> exchange.

The beginning price will be determined due to the first pair price. When all the additional tokens that are not issued are put into the LP.

The starting price will be the lowest price. Therefore, the first buyer will make a huge profit. The price may increase by 10,000, 100,000, even 1 million times compared to the starting price.

However, the first buyer is not a regular user. In general, they are development teams or people around them.

If the token price rises the first buyer take massive amount of profit and then sell all of the tokens or remove the LP.

In order to fundamentally prevent this unfairness, the launch time was disclosed in advance. Also black hole address is given so that LP cannot be removed.

The pre-announcement of the release time is intended to ensure that everyone has equal opportunity at the lowest price.

When transferring a 4jnet token, the initial fee is 90%. 6% will distribute as a dividend in proportion to the amount held by token owners. The rest of them will automatically be accumulated in the pool through sales. The fee is multiplied by 0.999 in each transaction. Accordingly, as the number of transactions increases, the charge gradually decreases. It will be reduced to a minimum of 10%.

### 3. Automated Market Makers

4. Decentralized exchanges (DEX) are a type of cryptocurrency exchange which allows for direct peer-to-peer cryptocurrency transactions to take place online securely and without the need for an intermediary.

# WHY 4JNET IS BETTER?

(vs SAFEMOON<sup>5</sup>)

- 1.Liquidity is permanently preserved by incineration of the recovery rights in the liquid wallet.
- 2.The fee rate for adding liquidity is entirely controlled by the contract.
- 3.Handling fees mapped to dividends of all currency holding addresses are set as an immutable constant.
- 4.The authority to the privileged address of the 4JNET project owner account is destroyed at the black hole address.
- 5.Set the maximum number of transactions for each transaction to 1% of the total issuance.
- 6.Realize the owner's profit by issuing 4JPASS that integrates the functions of NFT.

<b>P R O S</b>	<b>Total circulation of NFTs is capped at 5,000 while all holders enjoy a reduced 3% service charge.</b>	<b>C O N S</b>	<b>Total circulation of tokens(upper limit) is astronomical-equal to all the atoms in 1,000,000 galaxies.</b>
	<b>Founding team does not hold any tokens or have access to investor’s funds as per smart contract.</b>		<b>50% of tokens are held by its founding team who could crash the market at any time.</b>
	<b>Technical capabilities reflect an elite core team from enterprises such as Oracle, Microsoft, and IBM.</b>		<b>Technical capabilities are questionable with copied smart contracts containing spelling and other errors.</b>

5. Safemoon is a cryptocurrency token created in March 2021 on the Binance Smart Chain blockchain. Its market cap valuation as of October 2021 is \$3,646,766,397. See generally “SafeMoon,” Wikipedia at <https://en.wikipedia.org/wiki/SafeMoon>.

# EQUITABLE TREATMENT

## FOR ALL INVESTORS

**4JNET** is doing its best to treat all investors equally with fairness and equity throughout this project. The team does not want the project to work in favor of early investors alone, like many other projects floating in cryptocurrency space.

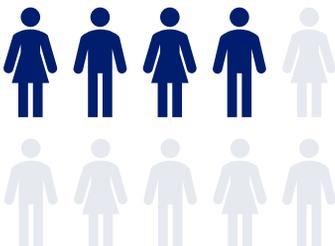

4JNET plans to make sure that the gap between earlier and later investors does not widen through the fee reduction mechanism. For all transactions performed on the blockchain. At the beginning 4JNET will charge you 90% gas fee as a service charge, and it will decrease to 10% within couple of hours. Through this, 4JNET will be able to maintain a stable process for tokens in the future.

- 6% will be distributed to all token holders
- Remainder to be transferred into a 4JNET liquidity pool

Furthermore, When transferring a 4jnet token, the initial fee is 90%. 6% of them are divided in proportion to the amount held by token owners, the rest is automatically accumulated in the pool through sales, and the fee is multiplied by 0.999 in each transaction. In summary, as the number of transactions increases, the fee gradually decreases. Fees will be reduced by 10%.

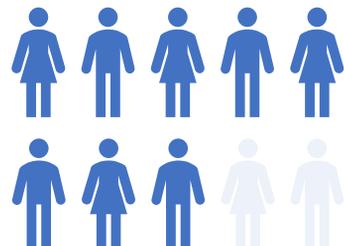

The initial 90% transaction fee will also work as a safety device. This is to prevent massive sales from continuing in the trading market as bots recklessly enter and start buying ultra-low prices. Transaction fees may fall to 10% within a few hours. Basically, this safety device is a measure to prevent a sudden change in the market.

### Early Investors

*Fair and  
Equitable  
Treatment*

### Later Investors

# **SECURITY AND FAIRNESS**

4JNET is fully aware that security is a major concern when investing in cryptocurrencies. This is because there is no way to get back tokens once they have been transferred out. This makes the need for a secure platform all the more important. 4JNET was built with this overarching concern in mind.

The U.S. Money Services Business (MSB) license<sup>6</sup> issued by the Financial Crimes Enforcement Network of the United States Treasury Department is one of the most sought-after licenses in the digital currency trading space. All institutions that grant monetary exchange and sending services in crypto must have this license.

4JNET has been awarded this license by the United States Treasury. This has boosted 4JNET to the level of a trustworthy, first-class platform for global investors interested in earning returns from cryptocurrencies. It is the first De-Fi project to acquire a U.S. MSB license in line with this market shape and regulation.

Additionally, 4JNET has its smart contract audited by the world-leading blockchain network security firm CertiK<sup>7</sup>. CertiK is known for working with big platforms and blockchain ecosystems. They provide auditing services for industry lions like Binance, Huobi, OKEx, Ethereum, Terra, and Neo.

4JNET's liquidity certificate and contracts are also blocked into a black hole to promote perfect decentralization. The true liquidity of its core engine will ensure that long-term holders see the most benefits. A development that is yet to be seen in the token industry today.

6. With few exceptions, each money services business (MSB) must register with the United States Department of the Treasury. Registration of an MSB is the responsibility of the owner or controlling person of the MSB. The term "money services business" includes any person doing business, whether or not on a regular basis or as an organized business concern, in one or more of the following capacities: (1) Currency dealer or exchanger; (2) Check casher; (3) Issuer of traveler's checks, money orders or stored value; (4) Seller or redeemer of traveler's checks; money orders or stored value; (5) Money transmitter; or (6) U.S. Postal Service. See generally "Money Services Business Definition," Financial Crimes Enforcement Network at <https://www.fincen.gov/money-services-business-definition>.

7. CertiK was founded in 2018 by professors from Yale University and Columbia University. It is a pioneer in blockchain security—utilizing best-in-class AI technology to secure and monitor blockchain protocols and smart contracts. CertiK's mission is to secure the cyber world starting with blockchain. CertiK applies cutting-edge innovations from academia into enterprise, enabling mission-critical applications to be built with security and correctness. See generally CertiK at <https://www.certik.io/>.

# 4JNET SECURITY

## Two Major Mechanisms For Ensuring Security and Fairness

CertiK is a world-leading blockchain network security firm.

4JNET's smart contract has fully audited by CertiK to guarantee security and fairness.

CertiK provides auditing services for industry giants like Binance, Huobi, OKEx, Ethereum, Terra, and Neo.

The U.S. Money Services Business (MSB) license is one of the most sought-after licenses in the digital currency trading space.

4JNET's has been granted an MSB license from the U.S. Treasury Department.

The MSB license authorized by the U.S. Treasury's Financial Crimes Enforcement Network provides further assurance of security and fairness.

# TRANSPARENCY

Transparency and open source is the name of the game. 4JNET strives to provide investors with long-lasting projects and maintains transparency in how to invest.

A limited edition NFT of 4JNET was released on October 20, 2021. A total of 5,000 limited edition NFTs will be sold in advance. This will be carried out prior to the official token launch scheduled for December 1, 2021.

The performance of the presale will not in any way affect the scheduled December 1, 2021 launch. 4JNET will proceed with the token launch regardless of whether the presale goal is met.

The NFTs sold to holders during the presale will account for 30% of all tokens on the December 1, 2021 launch. NFT holders will be able to claim 30% of all tokens after the launch and then unlock 2% of tokens every day after. As long as they hold their NFTs, they will be eligible to receive 2% of tokens every day going forward.

Moreover, holding the NFTs entitles the holders to a 3% decrease on all service charges.

Finally, the 4JNET team will not hold any 4JNET tokens. The funds raised from the presale will go towards advertising on social media platforms like Facebook, Twitter, YouTube, and key opinion leaders (KOLs) in the industry.

Through open source, 4JNET tokens are being developed transparently and they hold unlimited potential for its investors.

# TOKENOMICS/DISTRIBUTION

4JNET has launched a series of limited-edition NFTs for its community. A total of 5,000 NFTS will be minted and sold before the scheduled launch of the token on December 1, 2021. If the NFT is sold out in advance, the countdown will be updated to 72 hours.

- 4JNET's initial transaction fee is 90%
- For each transaction, the current transaction fee will become \*0.999
- Transaction fee will be reduced to 10% at most
- Transaction fee broken down as follows: 6% used as dividend and the remaining part will be sold and repurchased to liquidity

After the project officially kicks off, all NFT holders can claim 30% of all tokens issued and unlock 2% each day. NFT holders save 3% commission on transactions.

There will be a 10% airdrop volume with a 30% split payment. The amount of the drop is automatically incinerated after the airdrop.

Also, the initial liquidity certificated added by 4JNET will be transferred to the blackhole. Verification of this can be viewed at BscScan through the following link:

<https://bscscan.com/tx/0x35750d0597dfe2309fa7177bf532f8333cc8ed3238efda4197a6aab0a443f8b6>

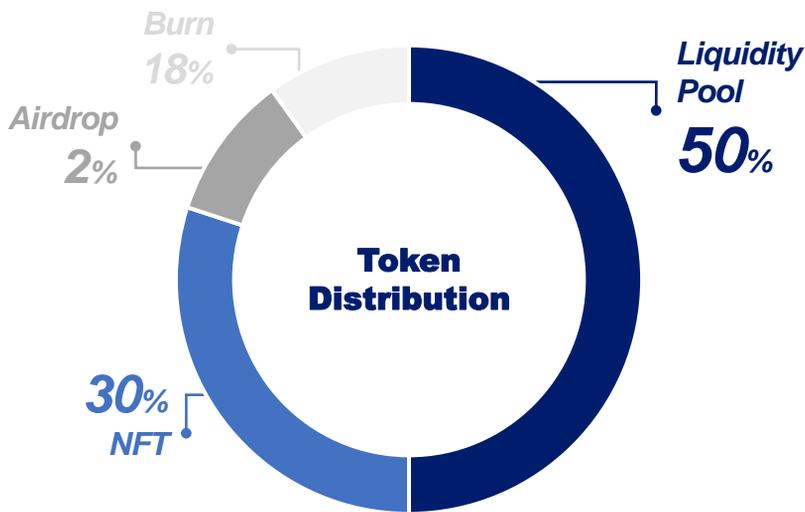

To sum up, purchasing an NFT will provide users with several benefits:

- NFT holders can claim more than 60 billion 4JNET tokens
- NFT holders will enjoy a reduction of 3% service charge
- NFT holders can trade NFTs freely and all interests will be transferred along with them

4JNET will also introduce a decreasing service charge mechanism to stabilize prices. Specifically, 90% of initial transaction amounts will be used as the service charge going down in stages to a final 10% commission. This will narrow the gap between early investors and late investors.

# Tokenomics

As mentioned, 6% will be distributed to all token holders through tokens. A portion of the remaining part (4%) will be automatically transferred into the liquidity pool as a smart contract constraint. The remainder will be burned. The below table provide information about the new 4JNET token.

<b>Token Name</b>	4JNET
<b>Token Symbol</b>	4JNET
<b>Type</b>	Binance Smart Chain (BSC)
<b>Total Supply</b>	1,000,000,000,000,000
<b>Contract</b>	0xbfb1a68962Fb4ED040FD3a0a71dC2C2015BCc667
<b>Token Distribution*</b>	50% LP 30% NFT 2% Airdrop 18% Burn

\*After airdrop distribution, remaining tokens will be automatically burned as per smart contract.

# **FOUR GUARANTEES**

## **OF 4JNET**

**Below are the four major promises underlying 4JNET and this unique project**

1. Providing for security and trust in this project is an overarching concern—4JNET has been issued an MSB license from the U.S. Department of the Treasury allowing the foundation to legally engage in activities such as initial coin offerings (ICOs), initial exchange offerings (IEOs), and cryptocurrency trading.
2. Ensuring transparency is another major quality—all business logic of 4JNET is made through smart contracts with full access to contract addresses and codes which are open sourced.
3. Full auditing of critical contract elements—4JNET passed the audit of a prominent blockchain security company CertiK. All critical contract elements are guaranteed for security and fairness.
4. Total fairness for all investors—this project's unique design and mechanisms put everyone on a level playing field through the effective application of decentralized finance (De-Fi). 4JNET's unique mechanisms effectively curbs the token oligarchs and centralized holding of tokens.

### **Four Promises of 4JNET**

**Security, trust**

**Transparency**

**Auditing**

**Fairness**

# ROADMAP

Below is a high-level roadmap for this crypto/NFT project.

**Start**

The license is highly recognized across the world as a pass of crypto currency.

01

CertiK is a world-leading blockchain network security company specializing in auditing the security and fairness of smart contract.

02

Raise propaganda and operation funds, enhance the competitiveness of early investors, and guarantee decentralization of 4JNET tokens.

03

Liquidity certificate is blocked into black hole to ensure fairness and fund security.

04

Contract rights are blocked into black hole so that no one can change signed contracts and ensure their security.

05

4JNET debuts and we'll try every means to maintain the decentralization of 4JNET tokens.

06

Justice-universe Metabus is scheduled to open in February 2022.

07

# **ABOUT THE 4JNET PASS**

4j pass is the only proof of authority to create an identity of Justice-Universe, and identity creation maintains a subordinate relationship with 4jpass.

The more users participate, the more fairness is proven and the concept of Decentralized will be stronger.

Therefore, we launched a pre-sale for 4j pass to gain more promotional and operating costs.

The 4j pass was created as a random image, and the images are stored in IPFS<sup>8</sup>. Accordingly, the link of each image is stored in the blockchain of the 4j pass.

4jpass receives a total of 60 billion 4jnet tokens, 2% every day.

The project is scheduled to debut on December 1, 2021.

# Justice-Universe

4J  
PASS

## Special authority of 4JPASS

- Within Justice-Universe, 4JPASS has its own territory (#0001-#5,000)
- Creating status for followers
- Create rules within territory.
- Specify the class of followers
- Writing an internal guide for everything including occupation, economy, politics, society, and military.
- It may interfere with other 4JPASS areas.

**Late Follower**

*into the Justice-Universe*

**Early Follower**

*in the Justice-Universe*

- A new follower has entered. (Payment for entry fee)
- 30% of the new inflow cost is automatically distributed to all existing followers.
- 50% of the cost is automatically sent to the 4JPASS holder
- 20% cost is automatically sent to 4J.

# Metaverse

## step 1

With hundreds of billions of combinations formulas provided by Justice Universe, You can have your own nft character, which is the only one in the world.

This is to manufacture nft in an easy way.

Before creating your own nft, you will choose a 4jpass that can be attributed, and a certain 4j token is used for nft production, and the proceeds are divided into % ratios and distributed to each nft.

This nft is registered in ipfs to create my own nft, the only one in the world.

If you become a member of the selected 4jpass, you can share the profits of 4jpass that will be attributed to you and create forces in the future.

It is the starting point that certain forces will expand to enable influence in all areas of territory, economy, and culture within the metas world.

## step 2

In order to include something that can be realized, it is currently being partially unreleased.

Our METAVERSE world will not be a structured reference.

It contains the items that will open in February 2022.

The white paper will be updated in real time.

# **DISCLAIMER**

This white paper was written to specifically explain the overall content, purpose, and progress of this project. It was written to provide readers and potential participants with critical information.

We are not liable for any damages such as losses or other related damages incurred by those referring to this white paper.

Since this white paper has been written as of the last revision date indicated below, content may be modified or changed in the future to reflect changes. The content included in this white paper is based on the best judgment and information available only in the present time.

This white paper is not written for any countries or regions where distribution, posting, and use of it is prohibited.

This white paper is only to be used for the purposes of this project. Furthermore, this document or any part thereof may not be distributed, reproduced, transmitted, or published to others for any other purpose without the prior written consent of the project team.

Last Revised: December 09, 2021.
